Google Workspace Security Assessment

Google Workspace

Align your collaboration platform with best practices

How do you benefit from the Google Workspace Security Assessment?

- **Security Compliance:** You use the latest tools to discover, remove and avoid present and future security gaps.
- **Awareness:** You prevent security incidents by making users and administrators aware of the implementation of security functions and guidelines.
- **Security Report:** You implement the defined security policies and measures according to the status quo analysis in the detailed security report.

Wabion has continuously refined the Google Workspace Security Assessment initiated by Google in 2016. Together with our certified experts, you will produce a security report for your Google Workspace environment in a one to two-day workshop and learn how to incorporate the latest security features. During implementation, we will support you with both technical expertise and change management skills to sensitize your colleagues to security issues.

Nino Flück
Senior Consultant Wabion
